

Cartridge seal

Description

Cartridge seals are designed for **rapid installation** on and **removal** from pump shafts. The cartridge seal is an arrangement of seal components on a shaft sleeve and in a seal gland constituting a single unit that is usually assembled and pre-set at the factory. Both bellows and spring-type seals can be cartridge-arranged if the pump stuffing box is large enough.

Cartridge seal units offer major maintenance advantages. Replacement is rapid and there is **far less risk of assembly error and assembly damage** than with conventional mechanical seal mounting.
